

Hello,

I am writing to support the position of Satellite Radio and it's ability to broadcast weather and traffic information. To prohibit this service would seem anti-competitive and an awkward attempt to cripple an emerging market. I would hope our government would be fostering this new technology and the potential revenue stream instead of looking for ways to protect elements of the media which are living off of outdated business models.

In conclusion, I urge the FCC to dismiss NAB's petition 04-160 and allow Satellite radio to grow in the way it naturally should.

David Stoller
